

RECYCLING BASED FILMS

Films made from recyclate

Films made from recycled plastics are fundamental elements in the long-term «plastic-strategy» of politics and industry. We also have committed ourselves to this **sustainable and future oriented direction** and developed two new high-performance product lines, «eco» and «eco+». Products from these product lines are **based on our standard films**, complemented by a **percentage of recyclate from industrial waste (PIR)** or from **end-consumer packaging waste (PCR)**.

RECYCLING BASED FILMS

Films made from recycled plastics are fundamental elements in the long-term «plastic-strategy» of politics and industry. We also have committed ourselves to this **sustainable and future oriented direction** and developed two new high-performance product lines, «**eco**» and «**eco+**».

Products from these product lines are **based on our standard films**, complemented by a **percentage of recyclate from industrial waste (PIR)** or from **end-consumer packaging waste (PCR)**.

Applications

Sales packaging, transport packaging and product protection packaging

Product Lines

eco+

Contains recyclates from packaging waste from the end consumer (private households, retail, industry). The technical term is post-consumer recycling (PCR).*

eco

Contains recyclates from industrial waste such as production waste, rejects or returns. The technical term is Post-Industrial-Recycling (PIR).*

** In comparison to PCR recyclates, PIR recyclates previously were not used as packaging material.*

Products

PE_{eco+30}

- 30% PCR content
- Natural cloudy coloration
- Shrink and sealable*
- Available above 25 micron

PE_{eco+50}

- 50% PCR content
- Natural cloudy coloration
- Shrink and sealable*
- Available above 25 micron

PE_{eco+80}

- 80% PCR content
- Natural cloudy coloration
- Shrink and sealable*
- Available above 25 micron

mo_{eco30}

- 30% PIR content
- High transparency
- Excellent shrinkage and sealability
- Available in 12.5/15/19 micron

** Related to the product and the recycling content.
Batch-related variations in the material properties are possible from delivery to delivery.*

Printing

Up to 8 colors (flexography)

Perforation

Available as pre- or non-perforated

Packing

Winded on paper cores, inner core diameter 76 mm

Do you have any questions about products or delivery times, or would you simply like **detailed advice?**

We will gladly assist you in finding the ideal film.
